# technorattan — durable weave elegance and quality

Today's technorattan is not just a simple imitation of natural rattan. Technorattan strips can be characterized by an interesting texture with matte or high-gloss finish. Practically unlimited colors to choose from, thanks to that our rattan can be easily matched to any design, may well compose with other elements and become a real decoration of your garden or terrace.

We have developed a range of products that combine harmoniously with our rattan mat as well as with finishing touches of polished aluminum. Patented technology and formula allows our products to protect against dirt, UV radiation, rain, snow and low temperatures, easily for outside use in winter conditions.

Our undoubted advantage is the flexibility of production. We can prepare the products on demand, even in small series or single copies, any size customer wants. The offer complements a wide range of colors on any of our products. For several years we are successfully offering our products in domestic market as well as abroad — our proposals are ideally suited as elements of decor, restaurant, office or home. The growing interest and the positive reception of our customers motivates us to work on new products and solutions as the most flexible to the needs of customers.
